

# Git Command Line Cheat Sheet

Clone a project (must be initialised on GitHub)

```
git clone https://github.com/user/project.git
```

Check status of local rep (find out which changes are staged for commit)

```
git status
```

Add (stage) all local changes

```
git add .
```

Commit all staged changes (to local repo)

```
git commit -m "message"
```

Update remote (i.e. GitHub) with local commits

```
git push
```

Update local repo with commits on remote

```
git pull
```

Create a branch

```
git branch branchname
```

List branches

```
git branch --list
```

Switch to a branch

```
git checkout branchname
```
